

Todd Crow

Princeton, NJ | <https://crowbell.design> | todd@crowbell.design | 609-613-6767

Marketing Technology Engineering: Template development and scripting (FreeMarker, Handlebars, AMPScript), composable template content architecture, CMS development (WordPress Multisite, HubSpot, Boutique, Radiant, HighLevel)

Marketing Automation: Workflow design and optimization, A/B testing frameworks, trigger-based campaign engineering, journeys and orchestrations

Quality Assurance: Email deliverability best practices, email regulations, cross-client testing (Litmus), localization, troubleshooting under deadline pressure, managing simultaneous campaigns

Languages & Templating: HTML/CSS, JavaScript, FreeMarker, Handlebars, AMPScript, SQL, XML, JSON

Marketing Platforms: Iterable, MessageGears, HubSpot, Salesforce Marketing Cloud

Data & Analytics: Snowflake, Tableau, SQL (complex queries, joins, CTEs, window functions)

Tools & Testing: Litmus, Email on Acid, Jira, Confluence, Jacquard, Photoshop, InDesign, Figma

Email Developer with 10+ years of specialized experience in full-lifecycle strategic email engineering.

Proven expertise in building scalable email template systems, managing complex marketing automation workflows, and optimizing campaign performance through data-driven segmentation and testing. Strong background in HTML/CSS development with script-based customization capabilities and advanced SQL skills for audience targeting and reporting.

Perfect Communications, Moorestown, NJ

Email Developer, 02/2026 - Present

- Code and build responsive email templates in Salesforce Marketing Automation
- Perform data segmentation and list creation based on client criteria
- Ensure data integrity and compliance with email marketing regulations
- Execute data cleansing and deduplication processes as needed
- Monitor campaign deployment for technical issues and resolve any sending errors
- Generate post-deployment technical reports on delivery rates, bounces, and technical performance
- Document email build procedures and technical configurations

Rakuten Rewards, San Mateo, CA (Remote)

Frontend Email Developer, 03/2022 - 01/2025

Technical Campaign Development & Deployment:

- Architected and deployed composable, dynamic email template systems incorporating advanced personalization logic using HTML, CSS, FreeMarker, and Handlebars for multi-business unit campaigns; ensured performance across email clients
- Performed engineering tasks related to debugging and building features on internal CMS's, building and maintaining scalable email templates rendering complex audience data from XML and JSON sources across Rakuten International properties (ShopStyle, Rakuten Rewards, Rakuten Canada, Collective Voice)
- Provided engineering and production support for multiple Rakuten International business units via Jira, Monday.com, Trello (ShopStyle, Rakuten Rewards, Rakuten Canada, and ShopStyle)

Collective/Collective Voice) ensuring alignment with each team's marketing goals and partner engagement strategies

- Implemented UTM-based dynamic heat map tool, analyzed the gathered email audience behavior data in Tableau

Cross-Functional Collaboration:

- Received email campaign and template system markups from Design Team in Figma; provided comments and made edits/created asset treatments as needed
- Managed ShopStyle's email program, using Jira and Confluence to maintain a task backlog, build sprints, communicate task status; used Slack to offer helpdesk support for marketing, product, and platform teams to resolve any emergent email program issues
- Delivered campaign analytics and answered technical specifications questions for Marketers; co-authored "State of the Email Program" slide deck
- Served as primary technical liaison between platform operations teams during system migrations and integrations
- Provided engineering support and troubleshooting for marketing tools including CMS platforms, MoveableInk, Tableau, and trigger-generating Java applications

Marketing Automation & Platform Management:

- Led technical migration from MessageGears to Iterable ESP for two business units, developing migration playbooks and ensuring seamless IP warmup processes
- Designed and optimized marketing automation workflows, reducing campaign deployment time by 30% through systematic process improvements
- Managed ESP-Database API integrations, identifying and eliminating redundant connections to streamline operations

Process, Documentation, & Training:

- Developed comprehensive technical documentation in Confluence for QA processes (using advanced Litmus functionality), template development, automation workflows, and compliance procedures adopted across multiple business units
- Managed inclusion and exclusion audience lists
- Maintained authentication protocols (SPF, DKIM, DMARC), advocated for adoption of BIMl
- Created training slide decks in Google Sheets, Powerpoint for campaign creation processes and analytics tool usage
- Delivered webinars, in-person training: design considerations for email, accessibility & accommodations for corporate communications

Crowbell Design, Hopewell, NJ

Freelance Web Developer, 01/2014 - 10/2025

- Built responsive HTML email templates using Litmus and Email On Acid for QA, maintaining email deliverability standards and cross-client compatibility across campaigns in NetCommunity and Luminate CMS platforms
- Developed landing pages, web pages, SMS campaign templates, javascript apps, documentation, manuals, and multi-channel marketing deliverables for a diverse range of clients
- Coordinated technical aspects of startup's ProductHunt launch campaign, achieving 545% traffic increase for VoxSnap's AudioHub products

Activate Masterclass Workshop Certification Exam, Iterable
Iterable Foundations Certified, Iterable
Email Automations Certification, Intuit Mailchimp

BA, History, University of Pittsburgh, 2009
UX / Project Management Certificate, Startup Institute, 2014
